Plant Care Guide

Watering

- Water your new plants consistently during the first 4-6 weeks to establish root systems
- Check the soil moisture regularly and adjust watering accordingly
- **Avoid overwatering**, as it can lead to root rot and other issues

Sunlight

- Place your plants in locations that match their specific sunlight requirements
- Some plants prefer full sun, while others thrive in partial shade
- Observe your plants regularly to ensure they are getting the right amount of sunlight

Mulching

- Apply a layer of mulch around the base of your plants to retain moisture and control weeds
- Keep the mulch away from the plant stems to prevent rot and pests

Fertilization

- Use a balanced, slow-release fertilizer to provide essential nutrients to your plants
- Follow the recommended dosage and application schedule for best results
- Consider our Fertilization Services for professional care tailored to your plants' needs

Pruning

- Remove any dead or diseased growth from your plants to promote healthy growth
- Prune your plants as needed to maintain their shape and size

Pest Control

- Monitor your plants regularly for signs of pests and act promptly if detected
- Use organic pest control methods whenever possible to minimize chemical impact

Seasonal Care

- Adjust your plant care routine based on seasonal changes in weather and temperature
- Provide additional protection during extreme weather conditions
